## Wordpress 3.5 webblog installeren

## 1)

Om WordPress te kunnen installeren heeft u een MySQL database nodig. Als u deze nog niet heeft, kunt u deze aanmaken via de Plesk interface. Zie hiervoor het artikel: MySQL database aanmaken (link: https://www.online-helpdesk.nl).

## 2)

U kunt WordPress downloaden van de website van de makers ervan: http://wordpress.org/latest.zip . Dit bestand moet u vervolgens op uw computer uitpakken en met een FTP-programma uploaden naar de map /httpdocs/ (Plesk) of /public\_html/ (DirectAdmin).

## 3)

Ga in uw browser naar uw website om de WordPress installatie te starten. Volg de onderstaande stappen om WordPress succesvol op uw hosting account te installeren.

## 4)

Volg daarna de onderstaande stappen om WordPress op uw hosting account te installeren. Ga in uw browser naar uw website om de WordPress installatie te starten.

Klik vervolgens op Create a Configuration File

There doesn't seem to be a wp-config.php file. I need this before we can get started.

Need more help? We got it.

You can create a wp-config.php file through a web interface, but this doesn't work for all server setups. The safest way is to manually create the file.

|            | W WORDI RESS                                                                                                                                                                                                   |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| We<br>kn   | come to WordPress. Before getting started, we need some information on the database. You will need to<br>by the following items before proceeding.                                                             |
| 1.         | Database name                                                                                                                                                                                                  |
| 2.         | Database username                                                                                                                                                                                              |
| 3.         | Database password                                                                                                                                                                                              |
| 4.         | Database host                                                                                                                                                                                                  |
| 5.         | Table prefix (if you want to run more than one WordPress in a single database)                                                                                                                                 |
| lf f<br>da | or any reason this automatic file creation doesn't work, don't worry. All this does is fill in the tabase information to a configuration file. You may also simply open <code>wp-config-sample.php</code> in a |
| te         | t editor, fill in your information, and save it as wp-config.php.                                                                                                                                              |
| ln a       | all likelihood, these items were supplied to you by your Web Host. If you do not have this information, then                                                                                                   |
| VO         | u will need to contact them before you can continue. If you're all ready                                                                                                                                       |

## **6)** Vul hierna de MySQL-databasegegevens in

| Below you should ent | er your database connection details. If | you're not sure about these, contact your host.                                     |
|----------------------|-----------------------------------------|-------------------------------------------------------------------------------------|
| Database Name        | jouweigenwebsite_nl_cmstest             | The name of the database you want to run WP in.                                     |
| User Name            | jouwe_cmstest                           | Your MySQL username                                                                 |
| Password             | ******                                  | and your MySQL password.                                                            |
| Database Host        | localhost                               | You should be able to get this info from your web host, if localhost does not work. |
| Table Prefix         | wp_                                     | If you want to run multiple WordPress                                               |
